Supervisory Patent Examiner, Art Unit 3733			

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments have been fully considered but are not persuasive for reasons already of record. It is noted that the device of Livingston remains curved whether in a fully expanded configuration or a partially expanded configuration, and the device is at least capable of being inserted into bone whether expanded or not, but especially when not fully expanded. Livingston continues to anticipate the claims. For further example, Regarding the inner member having a leading end nose that is enlarged relative to a body portion, again, Livingston satisfies this because the claim does not specify how the nose must be larger, and a leading end nose portion can be defined such that it is longer and therefore larger than a remaining body portion. For another example, the stabilization device comprises a concave curvature along a side thereof and a convex curvature on an opposite side of a wall thereof. Finally, the device of Livingston comprises an inner member and outer member that can be said to "include" a curved configuration, since the scope of what the term "include" is intended to encompass has not been defined and the arcuate shape of the device is formed by cooperation of both components. Thus, the inner member forms an arc in the outer member and the outer member forms an arc in its profile.
